

EXTECH's GRIDLOCK is a glass block grid system that “snaps in” – no mortar, glue, or tape necessary. This snap-in technology delivers shorter installation times - limiting disruptions in pedestrian traffic - and simplifies the installation process.

The GRIDLOCK mortarless glass block system utilizes lightweight, prefabricated aluminum frames that are also easily and quickly installed – a huge advancement over traditional mortar and heavy pre-glazed systems. A variety of framing patterns and finishes allow you to create stylish structures that lock

in long-term performance. The GRIDLOCK is great for transit and industrial applications, where vandalism is a concern. The system utilizes 2-inch thick glass blocks, which provide superior graffiti resistance and deliver the safety and comfort of daylighting.

## SYSTEM FEATURES & BENEFITS

- Nearly Unbreakable 2" thick glass blocks
- Individual 8" x 8" (nominal) glass block units simply snap and permanently lock in place
- No need to remove sealants or adhesives
- Unlimited framing colors and etched or back-screened blocks provide creative Art-In-Transit opportunities
- No ledges to collect dirt or debris
- Anodized or painted rigid aluminum framing for durability
- Glass offers superior graffiti resistance and daylighting
- Visual clarity for safety and security
- Joints do not deteriorate, collect dirt, effloresce, or discolor like mortared systems
- Fully gasketed joints
- Lightweight, pre-fabricated aluminum system for quick installation
- Capable of long structural spans
